

In connection with the questions received to the following request for the proposal:

No. 62/2020-DUBs

„The service requested is to test the inhibitory activity of 5 compounds in human deubiquitinase (DUB) panel, containing minimum 35 DUBs from deconjugating enzymes superfamily . The requested screening will be done at a single concentration determined by OAT from range (10-100 μ M) of a compound, performed at least in duplicate.

We provide answers to questions that have arisen up to 06.11.2020 r. do godz. 14:00:

Questions concerning the object of the tender:

Question: Could you be more specific: Is it exactly (rather than a ‘minimum’) 35 DUBs that you wish screened and quoted for? Also do you wish USP14 to be included as one of the DUBs? If so that assay costs the amount charged for two DUBs.

Answer: We want to screen for exactly 35 DUBs and we need a quote for this number.

Question: The quotation will be very different if you send all 5 compounds together (more economic) rather than in separate batches (less economic). Can you confirm that in fact you plan to send the compounds in three batches of 2, 2 then 1 compound if that is indeed the case?

Answer: We plan to send compounds in 3 batches. We realize that it will increase the price but we would like to do this sequentially.

The above-mentioned responses to the request for the proposal No. 62/2020-DUBs will be published on the Ordering Party’s website <https://oncoarendi.com/pl/> and concurrency database.

The deadline for submitting bids for the procedure No. 62/2020-DUBs remains unchanged, ie until November 10, 2020.
